DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-5, drawn to a method of screening a GABA receptor modulator.

Group II, claim 6, drawn to drug development method.

Group III, claim(s) 7 & 8, drawn to a compound as a sedative and an anxiolytic drug candidate.

Group IV, claim 7, drawn to a method of using a compound as a sedative drug.

Group VI, claim 8, drawn to a method of using a compound as anxiolytic drug.

Group VII, claim(s) 8 & 9, drawn to a method for the treatment, prevention or alleviation of anxiety.

Group VIII, claim(s) 7 & 10, drawn to a method for inducing anesthesia, pre-anesthesia, muscle relaxation or sedation or for treatment, prevention or alleviation of fever cramps or status epileptics .

2. The inventions listed as Groups I-VIII do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Group I-VIII lack a corresponding special technical feature in view of the prior art. The common technical feature in all groups is method of screening a compound for effects on the response of

the HPA axis. Fen et al. (WO01/05222) (provided on ISR) on page 4 paragraph 4 line 27.

Fen teaches administering a compound to a transgenic mouse and placing said mouse in a stress-inducing situation, monitoring plasma levels of corticosterone and adrenocorticotrophic hormone and comparing said levels to those in a transgenic mouse. And further teaches study the effects of a compound on the response of the HPA axis to stress monitoring plasma levels. Since Fen disclosed the method of the instant claims the technical feature lacks novelty in view of the prior art.

Therefore the technical feature linking the inventions of Groups I-VIII does not constitute a special technical feature as defined by PCT Rule 13.2 as it does not define a contribution over the prior art. Accordingly, Groups I-VIII are not so linked by the same or a corresponding special technical feature as to form a single inventive concept.

3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

5. The examiner has required restriction between product and process claims.

Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder. All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. **Failure to do so may result in a loss of the right to rejoinder.** Further, note that the prohibition against double

patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.
